Rolling Dice

PW SKILLS

Problem statement

- Your task is to create an interactive web application using Javascript that allows users to simulate rolling dice and compete against each other.
- The application should support various types of dice and provide a clear user-friendly interface for rolling and viewing results
- The application should allow two players, each to roll their dice and determine the winner based on the result.
- There should be one button, which on click will generate a random number of the dice.
- You are allowed to add as many features as you want.

Tech stack

The tech tools to be used are -

- HTML
- Tailwind CSS or CSS
- JavaScript

Sample Output

In case you are not getting that how UI should look, use this output image as a reference and create a website like this one. You can modify the UI design but make sure that it has at least all the mentioned features in it.

Submission Process

The submission process is similar to that of the assignment submission through the dashboard.

Mandatory Process **(Process PDF Link)**

Step 1: Create a local folder on your machine.

Step 2: Complete your assignment in that folder.

Step 3: Create a new repository on Git Hub for uploading this project over there.

Step 4: Upload your project in that repository by drag and drop or by using git commands (if you are aware of it).

Step 5: Submit the GitHub repository link in the assignment submission of this project.

Optional Steps

Step 6: Deploy your project on GitHub pages, Netlify or Vercel (if you are aware of this platform).

Step 7: Add the deployed link in the About section of your GitHub repository.

Note: The solution of this project will be provided to you after 1 week of uploading of this project, so it will be good if you can create and submit it within 1 week there is no time limit defined for its submission so take your time and create it.

**** Best of Luck and Happy Learning ****
